

# ***Annual Drinking Water Quality Report***

**Town of Plevna  
PWSID#MT0000307  
PO Box 27  
Plevna, MT 59344**

We're very pleased to provide you with this year's Annual Quality Water Report. We want to keep you informed about the excellent water and services we have delivered to you over the past year. Our goal is and always has been, to provide to you a safe and dependable supply of drinking water. Our water source is ground water. We have two wells, drawing water from the Fort Union formation. At the present time we serve 130 people. We have completed a source water protection plan that provides more information such as potential sources of contamination to our drinking water supply. This plan can be found online at [HYPERLINK "http://apps.msl.mt.gov/Geographic\\_Information/Data/SourceWaterProtectionProgram/"](http://apps.msl.mt.gov/Geographic_Information/Data/SourceWaterProtectionProgram/) [http://apps.msl.mt.gov/Geographic\\_Information/Data/SourceWaterProtectionProgram/](http://apps.msl.mt.gov/Geographic_Information/Data/SourceWaterProtectionProgram/).

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline (800-426-4791).

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present include:

Microbial contaminants, such as viruses and bacteria that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife;

Inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming;

Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses;

Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems;
